# **Overview**

he purpose of this document is to provide a high level overview of Service Provider API definitions and protocols. This will allow internal and external applications to be able to communicate with Wrappy to access essential functions and data for service providers. Service APIs can be consumed by any mobile, web or desktop application that HTTPS (mandatory) calls through the REST (Representational State Transfer) endpoints exposed by the Wrappy platform.

#### **Definition of Key Terminologies**

Term	Definition
Service Peer	The entity that offers services using the Wrappy platform
Service Provider	The participant that manages the functionality of the service peer
Digital Asset	Digital representation of an asset, i.e. coupon, token, rewards and others
Coupon	A digital asset that can be used to represent redeemable items with value
Token	A digital asset that can be used to represent virtual currency
Reward	A digital asset that can be used to represent points given for loyalty
JWT	Jason Web Token
REST	Representational State Transfer (an architectural style that defines a set
	of constraints and properties based on HTTP.)

#### **Response Structure**

Below shows the response structure of the service provider API in JSON format. Application must handle Http response codes first to identify the status of the http call and then proceed to interpret the resulting response structure when the Http response code is **100**. When an error occurred during API initiation, it will response with code **-100** and the data element contains the error message.

The data element will be dynamic depending on the request type which will be explained in details in the next section.

#### Service Provider API

**Response Structure** 

#### **Service Response Codes**

The following table summarized the response code returned by the api services.

Code	Description
100	Success
-100	Error (refer to "data" element for details)

# **Service Definitions**

his section describes the different API service definitions for request/response protocol. It is very important to understand that all request/response must use JSON as the standard data format. All request to the API endpoints (except for /authenticate and ) must have a valid access token in the header using bearer authorization. When getting Http Code 401 (Unauthorized Access), the application may try to request first for a new access token using the provided authentication endpoint.

#### **Endpoint Groups**

The following table summarized the two primary endpoint groups.

Group	Description	Endpoint
Service User	API endpoints for service users	/user
Service Provider	API endpoints for service providers	/provider

#### **Authenticate Provider**

Authorization	None
Request Type	POST
Endpoint	/provider/authenticate
Request	{     "username": "myusername",     "password": "mypassword",     "type": "provider" }
Response	{     "success": true,     "token": "eyJhbGciOiJIUzI1NilsInR5cCl6lkpXVCJ9.eyJpZCl6ImFseWFsZSIsInBI ",     "data": {         "provider": {             "id": "serviceProvider",             "name": "Provider Manager"         },         "peer": {             "id": "servicePeer",             "name": "Service Corporation",             "balance": 0         }     },     "error": null }
Note	Values for type: "provider" – service provider "approver" – service approver

#### **Authenticate User**

Authorization	None
Request Type	POST
Endpoint	/user/authenticate
Request	{     "username": "myusername",     "password": "mypassword" }
Response	{   "success": true,   "token": "eyJhbGciOiJIUzl1NilsInR5cCl6lkpXVCJ9 ",   "data": {     "provider": "serviceProvider"   },   "error": null }
Note	Values for <b>type</b> : "provider" – service provider "approver" – service approver

## Register Service User

Authorization	None
Request Type	POST
Endpoint	/user/register
Request	{ "id": "harry", "name": "Harry Potter", "password: "not4u2know", "provider": " serviceProvider ", "type": "CONSUMER" }
Response	{     "code": 100,     "description": "SUCCESS",     "date": "2019-05-01T12:50:33.466Z",     "data": {         "id": "harry@servicePeer ",         "secret": "xCtqMbQPivSx"     } }
Note	Values for <b>type</b> : "CONSUMER" – user "STORE" – store

## **Register Service Store**

_	
Authorization	None
Request Type	POST
Endpoint	/user/register
Request	{   "id": "sushi",   "name": "Sushi Restaurant",   "password: "not4u2know",   "provider": " serviceProvider ",   "type": "STORE" }
Response	{     "code": 100,     "description": "SUCCESS",     "date": "2019-05-01T12:50:33.466Z",     "data": {         "id": "sushi@servicePeer",         "secret": "xCtqMbQPivSx"     } }
Note	Values for <b>type</b> : "CONSUMER" – user "STORE" – store

## **Register Coupon**

Authorization	Bearer (Provider)
Request Type	POST
Endpoint	/provider/coupon/register
Request	{     "name": "Happy Meal",     "denomination": [100, 200, 300] }
Response	{     "data": "IYG8QBJV4SBQ51",     "code": 100,     "description": "SUCCESS",     "date": "2018-12-10T17:14:20.225Z" }
Note	

## **Issue Coupon**

Authorization	Bearer (Provider)
Request Type	POST
Endpoint	/provider/coupon/issue
Request	{   "recipient": "user@servicePeer",   "coupon": "IYG8QBJV4SBQ51",   "quantity": 2,   "value": 500,   "expiry": 30 }
Response	{     "code": 100,     "description": "SUCCESS",     "date": "2018-12-10T17:14:56.450Z",     "data": " 3VDHWRJV5806LS" }
Note	Expiry represents the number of days from registration date

#### **Deactivate Coupon**

Authorization	Bearer (Provider)
Request Type	POST
Endpoint	/provider/coupon/deactivate
Request	{   "coupon": ["3VDHWRJV5806LS "],   "reason": "Invalid Coupon" }
Response	{     "code": 100,     "description": "SUCCESS",     "date": "2018-12-10T17:14:20.225Z",     "data": "3VDHWRJV5806LS" }
Note	

## **Activate Coupon**

Authorization	Bearer (Provider)
Request Type	POST
Endpoint	/provider/coupon/activate
Request	{     "coupon": ["3VDHWRJV5806LS "] }
Response	{     "code": 100,     "description": "SUCCESS",     "date": "2018-12-10T17:14:20.225Z",     "data": "3VDHWRJV5806LS" }
Note	

## **Redeem Coupon**

Authorization	Bearer (User)
Request Type	POST
Endpoint	/user/coupon/redeem
Request	{   "coupon": ["3VDHWRJV5806LS "],   "store": "store@servicePeer" }
Response	{     "code": 100,     "description": "SUCCESS",     "date": "2018-12-10T17:14:20.225Z",     "data": "3VDHWRJV5806LS" }
Note	

## **Transfer Coupon**

Authorization	Bearer (User)
Request Type	POST
Endpoint	/user/coupon/transfer
Request	{     "coupon": ["3VDHWRJV5806LS "],     "recipient": "recipient@servicePeer" }
Response	{     "code": 100,     "description": "SUCCESS",     "date": "2018-12-10T17:14:20.225Z",     "data": "3VDHWRJV5806LS" }
Note	

#### **Settle Coupon**

Authorization	Bearer (User)
Request Type	POST
Endpoint	/user/coupon/settle
Request	{     "coupon": ["3VDHWRJV5806LS "] }
Response	{     "code": 100,     "description": "SUCCESS",     "date": "2018-12-10T17:14:20.225Z",     "data": "3VDHWRJV5806LS" }
Note	

#### **Provider: List Asset**

Authorization	Bearer (Provider)
Request Type	GET
Endpoint	/provider/asset/list
Request	
Response	[{     "id": "IYG8QBJV4SBQ51",     "\$class": "net.wrappy.asset.common.DigitalAsset",     "name": "Food",     "status": "ACTIVE",     "type": "COUPON",     "registered": "2019-05-01T05:33:31.554Z",     "registeredBy": "resource:net.wrappy.participant.ServiceProvider#serviceProvider",     "owner": "resource:net.wrappy.asset.service.ServicePeer#servicePeer"     ]]
Note	

#### **Provider: List Coupon**

Authorization	Bearer (Provider)
Request Type	POST
Endpoint	/provider/coupon/list
Request	{     "filter": "ALL" }
Response	"\$class": "net.wrappy.asset.service.Coupon",  "id": "IYG8QBJV4T3ZOW",  "value": 500,  "expiryDate": "2019-05-31T05:55:30.945Z",  "usedDate": "2019-05-01T12:57:13.027Z",  "usedStore": "resource:net.wrappy.participant.ServiceUser#store@servicePeer",  "status": "SETTLED",  "issuedDate": "2019-05-01T05:55:30.945Z",  "modifiedDate": "2019-05-01T12:57:27.266Z",  "modifiedDate": "2019-05-01T12:57:27.266Z",  "modifiedBy": "resource:net.wrappy.participant.ServiceUser#store@servicePeer",  "reason": "",  "issuedBy": "resource:net.wrappy.participant.ServiceProvider#serviceProvider",  "asset": "resource:net.wrappy.asset.common.DigitalAsset#IYG8QBJV4SBQ51",  "owner": "resource:net.wrappy.participant.ServiceUser#user@servicePeer ",  "issuer": "resource:net.wrappy.asset.service.ServicePeer#servicePeer"  }]
Note	"filter" values are "ALL", "ACTIVE", "DEACTIVATED", "USED", "SETTLED"

#### **Service User: List Coupon**

Authorization	Bearer (User)
Request Type	POST
Endpoint	/user/coupon/list
Request	{     "filter": "ALL" }
Response	[{     "Śclass": "net.wrappy.asset.service.Coupon",     "id": "IYG8QBIV4T3ZOW",     "value": 500,     "expiryDate": "2019-05-31T05:55:30.945Z",     "usedDate": "2019-05-01T12:57:13.027Z",     "usedStore": "resource:net.wrappy.participant.ServiceUser#store@servicePeer ",     "status": "SETTLED",     "issuedDate": "2019-05-01T05:55:30.945Z",     "modifiedDate": "2019-05-01T12:57:27.266Z",     "modifiedBate": "2019-05-01T12:57:27.266Z",     "modifiedBy": "resource:net.wrappy.participant.ServiceUser#store@servicePeer",     "reason": "",     "issuedBy": "resource:net.wrappy.participant.ServiceProvider#serviceProvider",     "asset": "resource:net.wrappy.asset.common.DigitalAsset#IYG8QBJV4SBQ51",     "owner": "resource:net.wrappy.participant.ServiceUser#user@servicePeer ",     "issuer": "resource:net.wrappy.asset.service.ServiceUser#user@servicePeer ",     "issuer": "resource:net.wrappy.asset.service.ServicePeer#servicePeer ",     "issuer": "resource:net.wrappy.asset.service.ServicePeer#servicePeer ",
Note	"filter" values are "ALL", "ACTIVE", "DEACTIVATED", "USED", "SETTLED"

#### **Service Store: List Coupon**

Request Type  Endpoint  /user/coupon/list  {     "filter": "ALL"     }  {     "\$class": "net.wrappy.asset.service.Coupon",     "value": \$00,     "expiryDate": "2019-05-31T05:55:30.945Z",     "usedDate": "2019-05-01T12:57:13.027Z",     "usedDate": "2019-05-01T12:57:13.027Z",     "usedDate": "2019-05-01T12:57:13.027Z",     "usedDate": "2019-05-01T12:57:27.266Z",     "modifiedDate": "2019-05-01T12:57:27.266Z",     "modifiedDate": "2019-05-01T12:57:27.266Z",     "modifiedDate": "2019-05-01T12:57:27.266Z",     "modifiedBy: "resource:net.wrappy.participant.ServiceUser#store@servicePeer",     "reason": "",     "issuedDate": "2019-05-01T12:57:27.266Z",     "modifiedBy: "resource:net.wrappy.participant.ServiceUser#store@servicePeer",     "asset": "resource:net.wrappy.participant.ServicePerovider#serviceProvider",     "asset": "resource:net.wrappy.participant.ServicePeer#servicePeer ",     "issued": "resource:net.wrappy.participant.ServicePeer#servicePeer ",     "issued": "resource:net.wrappy.asset.service.ServicePeer#servicePeer ",     "issuedDate": "2019-05-01T12:57:27.262Z",     "issuedDate": "2019-05-01T12:57:27.262Z",     "issuedDate": "2019-05-01T12:57:27.262Z",     "issuedDate": "2019-05-01T12:57:27.262Z",     "issuedDate": "2019-05-01T12:57:27.262Z",     "issuedDate":
